Contactors – General Purpose and Definite Purpose

A rugged and comprehensive range of contactors from 5 to 900 HP

Sprecher+Schuh IEC contactors are designed and manufactured in plants that are quality certified to international standard ISO 9001

Sprecher + Schuh's broad line of general purpose contactors combine performance and reliability in space saving designs that are well proven and used the world over. Sprecher + Schuh's IEC design is dimensionally among the smallest devices in the industry. A range of definite purpose contactors is also available, providing reliable and economic performance in commercial applications.

Economy and selection

Four different contactor families provide a wide variety of contactor sizes, one for practically every horsepower increment! The ability to select intermediate sizes assures a closer match for your motor and provides economy not found with traditionally sized devices. Definite purpose contactors are available in one, two, three and four pole, up to 90A.

Precisely match the contactor to the application

Unique to IEC-style contactors is the ability to select the exact device required for a specific application. By identifying the conditions under which the contactor will be used, i.e., resistive loads, reversing, inching and plugging, etc., published "life-curve" data predicts contact life in millions of operations. This information enables you to select the precise contactor for your application... without buying too much or too little.

Designed for long life

Destructive electrical arcs are common when opening or "breaking" the contacts of larger contactors. Sprecher + Schuh general purpose contactors are designed to dramatically reduce electrical arcing by quickly guiding the arc off of the contacts and into specially designed "arc chutes." This special design divides and eliminates the electrical arcs quickly, significantly increasing contact life and assuring reliable operation.

Limitless choices

A comprehensive selection of modular accessories is available for all contactor families, which allows infinite contactor and starter combinations, both open and enclosed.

Safety in mind...

Virtually all Sprecher + Schuh contactors are designed to be safe from accidental contact with the finger or back-of-hand. On the smaller contactors, terminals and set screws are recessed, while larger devices (up to Series CA9) accept terminal covers that provide protection according to VDE 0106, Part 100.

Manufactured to rigorous quality standards

Sprecher + Schuh contactors are designed and manufactured in plants that maintain quality certification to the rigorous international standards, ISO 9001. Sprecher + Schuh manufacturing facilities renew ISO certification every three years by passing an exacting quality assurance audit.

International standards and approvals

All Sprecher+Schuh IEC contactors are cULus CSA Approved, along with several other certifications. They also carry the CE Mark and meet IEC 60947-1 requirements. They are approved in virtually every international market.

GENERAL PURPOSE

7.5HP 50HP

75HP

900HP

A

Contactors

CA8 Series Contactor

- Provides commercial-grade performance for motors up to 7.5 HP
- Features low-profile design and 45mm width
- Maintains narrow width with modular, snap-on accessories
- Performs up to 700,000 electrical and 15,000,000 mechanical operations

CA7 Series Contactor

- Covers up to 75HP industrial applications
- Features small dimensions, as little as 45mm wide
- Uses interchangeable accessories for all contactor sizes
- Provides flexibility with reversible coils for group installation
- Has dual-cage clamp lugs on CA7-30 and larger units
- Designed and tested with respect to Type 1 and 2 Coordination

CA9 Series Contactor

- Covers up to 900HP industrial applications
- Provides a dimensional advantage with a smaller size and footprint

- Features a universal electronic AC/DC coil
- Has various application selections, with IEC solutions up to 2650A
- Includes expanded certifications
- Provides extended life with arc quenching technology

DEFINITE PURPOSE

CDP2 Definite Purpose Contactors

- Covers commercial applications up to 90A / 50HP
- Available in one, two, three and four pole
- Meet or exceed electrical and mechanical requirements defined by definite purpose contactor standards
- Three convenient wire connection methods

The information in this chart was derived from Table 50.1 of UL standard 508A. The voltages listed are rated motor voltages. The currents listed shall be permitted for system voltage ranges of 110-120, 220-240, 380-415, 440-480 and 550-600 volts.

The full-load current values are for motors running at usual speeds and motors with normal torque characteristics. Motors built for especially low speeds or high torques may have higher full-load currents, and

multi-speed motors will have full-load currents varying with speed. In these cases, the nameplate current ratings shall be used.

Caution: The actual motor amps may be higher or lower than the average values listed above. For more reliable motor protection, use the actual motor current as listed on the motor nameplate. Use this table as a guide only.

R150	1.0	0.22	~	~	28
R300	1.0	0.22	0.11	~	28

- ① The numerical suffix designates the maximum voltage design values, which are to be 600, 300, and 150 volts for suffixes 600, 300, and 150 respectively. Test voltage shall be 600, 250, or 125 volts.
- ② For maximum ratings at voltages between the maximum design value and 120 volts, the maximum make and break ratings are to be obtained by dividing the volt-amperes rating by the application voltage. For voltages below 120 volts, the maximum make current is to be the same as for 120 volts, and the maximum break current is to be obtained by dividing the break volt-amperes by the application voltage, but these currents are not to exceed the thermal continuous test current.
- ③ For maximum ratings at 300 volts or less, the maximum make and break ratings are to be obtained by dividing the volt-ampere rating by the application voltage, but the current values are not to exceed the thermal continuous test current.
- ④ Data tables extracted from UL508 Standards for Industrial Control Equipment.

Predicting Electrical Life

Sprecher + Schuh contactors are designed for superior performance in a wide variety of applications, by giving consideration to the specific load, utilization category and required electrical life, you can purchase exactly the type

and size of contactor required. This assures reliable operation and high value the ability to very closely match the contactor to the application.

- ① Identify the appropriate utilization category. For this example, we will determine CA7 contact life for inching and plugging squirrel-cage motors. ❶

Utilization Category	Definition	
AC-1	Resistance Furnaces	Non inductive or slightly inductive loads, Resistive Furnaces
AC-2	Slip-ring motors	Starting and stopping of running motors
AC-3	Squirrel-cage motors	Starting and stopping of running motors
AC-4	Squirrel-cage motors	Starting, plugging, and inching (Plugging is understood as stopping or reversing the motor rapidly by reversing the motor primary connections while the motor is running. Inching [or jogging] is understood as energizing a motor once or repeatedly for short periods to obtain small movements of the driven mechanism.)
AC-15	Electromagnets	Electromagnets for contactors, valves, solenoid actuators

- ② Choose the graph for the utilization category selected. (a graph pertaining to most Utilization Categories can be found in each contactor section.)

- ③ Locate the Rated Operational Current (Ie) along the bottom of the chart and follow the graph lines up to the intersection of the appropriate contactor's life-load curve.

- ④ Read the estimated contact life along the vertical axis.

Squirrel-cage motors: starting, plugging, inching Ue = 230...460 VAC

❶ A comprehensive list of Utilization Categories can be found in each contactor section, however, these are the primary categories used in most industrial motor applications.
 ❷ The life-load curves shown here are based on Sprecher+Schuh tests according to the requirements defined in IEC 60947-4-1. Since contact life in a given application is dependent on environmental conditions and duty cycle, actual application contact life may vary from that indicated by the curves shown here.

Determining Contact Life

To determine the contactor's estimated electrical life, follow these guidelines:

1. Identify the appropriate Utilization Category from Table A.
2. In the technical pages for each contactor size, choose the graph for the Utilization Category selected.
3. Locate the Rated Operational Current (I_e) along the bottom of the chart and follow the graph lines up to the intersection of the appropriate contactor's life-load curve.
4. Read the estimated contact life along the vertical axis.

- R** Resistance of test circuit

- ① Utilization categories and test conditions for AC & DC. For contactors according to IEC 158-1, starters according to IEC 292-1 ... 4 and control switches according to IEC 337-1 and IEC 337-1A.
- ② With a minimum value of 1000A for *I* or *I_c*.
- ③ With a minimum value of 800A for *I_c*.
- ④ With a minimum value of 1200A for *I*.
- ⑤ Plugging is understood as stopping or reversing the motor rapidly by reversing the motor primary connections while the motor is running. Inching [or jogging] is understood as energizing a motor once or repeatedly for short periods to obtain small movements of the driven mechanism.

Determining Contact Life

To determine the contactor's estimated electrical life, follow these guidelines:

1. Identify the appropriate Utilization Category from Table A.
2. In the technical pages for each contactor size, choose the graph for the Utilization Category selected.
3. Locate the Rated Operational Current (I_b) along the bottom of the chart and follow the graph lines up to the intersection of the appropriate contactor's life-load curve.
4. Read the estimated contact life along the vertical axis.

① Utilization categories and test conditions for AC & DC. For contactors according to IEC 158-1, starters according to IEC 292-1 ... 4 and control switches according to IEC 337-1 and IEC 337-1A.

② Only according to VDE.

③ $P = U_e \times I_e$ rated power [W]. The value "6 x P" has been derived from an empiric relationship which covers most magnetic loads for DC up to an upper limit of $P = 50W$.

④ Life data shown are the minimum test requirements per UL/CSA. Actual life in application may exceed these values.

⑤ Value pending on 55A and 97A contactors at time of this printing.

Contactor Catalog Numbers

Sprecher+Schuh employs a catalog number coding system for contactors (and many other devices) that follows a logical pattern, where every digit signifies a specific device attribute. Where indicated, the use of dashes (–) serves to separate device characteristics and should always be used when ordering.

The following example illustrates all of the possible combinations when specifying contactors and reversing contactors (open type only). See Section C for an explanation of the catalog number coding system for enclosed contactors and starters.

CA 7-12 - 10 - 120

Configuration	
CA	Contactors
CAU	Reversing Contactors
CAN	NEMA Labeled Contactors
CA(V)L	Lighting Contactors
CNX	Special Purpose Contactors
CA_Y2	Elevator Wye-Delta

Contactor Series	
<u>Series CA8</u>	<u>Series CA9</u> ②
8-09(C)	9-116(-EI)
8-12(C)	9-146(-EI)
	9-190(-EI)
<u>Series CA7</u> ①	9-205(-EI)
7-9(E)	9-265(-EI)
7-12(E)	9-305(-EI)
7-16(E)	9-365(-EI)
7-23(E)	9-400-EI
7-30(E)	9-460-EI
7-37(E)	9-580-EI
7-40(E)	9-750-EI
7-43(E)	9-860-EI
7-55(E)	9-1060-EI
7-60(D)	9-1260-EI
7-72(D)	9-2050-EI
7-85(D)	9-2650-EI
7-90(D)	
7-97(D)	

Auxiliary Contacts	
-10	N.O. Auxiliary
-01	N.C. Auxiliary
-11	N.O. & N.C. Auxiliary
-02	2 N.C. Auxiliaries
-22	2 N.O. & 2 N.C. Aux.
-00	No Auxiliaries
4-pole CA7 & CA8 Contactors ③	
-M40	4 N.O. Power Poles
-M31	3 N.O. Power Poles/ 1 N.C. Power Pole
-M22	2 N.O. Power Poles/ 2 N.C. Power Poles

Coil Code	
<u>AC</u>	<u>DC</u>
24Z	12E, 12DD
120	24E, 24DD
208	24W
220W	36E
240	48E, 48DD
277	110E, 110DD
380	220E, 220DD
480	
600	<u>AC/DC</u>
	24W
	48W
	120W
	480W

**This illustration is for reference only.
Turn to the appropriate page to determine
specific catalog number.**

① (D) and (E) suffix designates DC contactors.
 ② (-EI) suffix indicates electronic coil. Optional on CA9-116...365, standard on CA9-400...2650.
 ③ On four pole contactors, this number designates main power pole configuration.
